

garden knitted of nature

People:

Garden was created for young couple that works at home. His name is Greg and her name is Margaret. But it could be any young couple that works at home.

Place:

This spatial garden with house with lots of windows should be an inspiration for them. The house is localized in Polish countryside, in pine forest. The house is on a small slope. To cope with that situation few terraces were created.

Nature:

Garden design is using existing forest stand to blend in. Back of the garden looks like part of forest. Wicker balls scattered in grass combine well with lighting balls and underline natural design lines. Species selection was suited to natural settlement of pine forest which is dry and sandy. Garden grasses, forest plants and fast growing covering plants such as: Hedera helix, Pachysandra terminalis and Vinca minor were used.

Light:

Path lighting underlines natural character of garden. Lighting balls create magical mood. The best view of garden could be seen at night. Lighting balls create very mystic atmosphere.

Paths:

Wooden slabs used to create a path are making an impression of an old garden.

Space:

Terrace is partially open. That allows to admire the line of forest and creates better contact with nature.

Relax:

Thick pillows on sits on terrace help to rest comfortable. Grill is placed next to the house, which allows parties to take place both in the house and in the garden. Additional relaxing place which is placed on the end of garden helps to rest in more private conditions. These place is surrounded by pines and birch.

Greg: He likes grapes, that's why there is vine with blue, juicy grapes on terrace. He also likes birds –so there is a bird table in the back of garden.

Margaret: She likes natural character of garden and the feeling that you are in a forest.
